

domovari - spektra matt

Products in *spektra matt* are not homogeneous, but coated with a special lacquer. We manufacture countertop basins and freestanding bathtubs in *spektra matt* in all NCS or RAL colours.

DAILY CLEANING

The *spektra matt* surface is non-porous and compact, making it resistant to dirt and easy to clean. For daily cleaning, simply wipe with a damp, soft cloth and a mild household or glass cleaner.

As a general rule, avoid allowing stains from strongly colouring products – such as hair dye, nail varnish, lipstick, etc. – to dry on the surface, as they may become

difficult or even impossible to remove without leaving residue.

Abrasive or scouring cleaners should never be used on *spektra matt* surfaces. Please note that excessive cleaning of a specific area may result in an unevenly matt appearance across the surface.
