

domovari - Textile covered Fronts (ARNO creation Baumann)

The fabrics of the ARNO series (Creation Baumann) are used at domovari exclusively flush-mounted within framed fronts and are therefore permanently integrated into the furniture. They cannot be removed for cleaning – care must be carried out directly on the installed furniture and should be performed gently.

LIGHT SOILING

Dust and loose particles can be easily removed with a soft upholstery nozzle on a low suction setting or with a dry microfibre cloth. Regular dry cleaning helps maintain the longevity of the surface.

STAIN TREATMENT

Fresh stains – such as from water, coffee, toothpaste or cosmetics – should be dabbed immediately with an absorbent cloth or kitchen paper. Afterwards, localised cleaning can be carried out with a slightly damp, soft cloth and a mild delicates detergent.

Avoid vigorous rubbing or soaking the fabric over a large area.

MORE INTENSIVE CLEANING

For more stubborn soiling, a damp microfibre cloth combined with a mild upholstery cleaner may be used. Always test the product on an inconspicuous area prior to use.

Do not use aggressive household cleaners, abrasive products, steam cleaners or mechanical brushes.

MATERIAL PROPERTIES

Abrasion resistance: 40,000 Martindale

The fabric is highly resistant to mechanical wear – ideal for everyday use in furniture applications.

Pilling grade: 4–5

The material shows minimal tendency to pill and retains its attractive appearance with proper care.

GENERAL INFORMATION

Do not wet clean – full-surface moisture cleaning is not possible due to the fixed installation.

Do not iron or steam – thermal treatment is unsuitable.

Do not rub – gentle dabbing preserves the fabric's structure and colour intensity.
